Flexi Construction Steps are robust and durable solutions for stairs on construction sites.

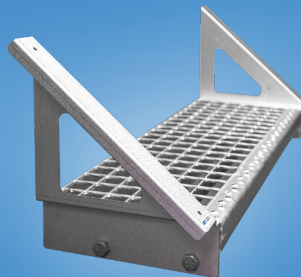

The steps have a standard depth of 240 mm but are available in various widths to meet different needs.

The steps are made of the steel type S235JR and hot-dip galvanized according to DIN 1461, ensuring good corrosion protection. With anti-slip grates on the surface, a secure foothold is guaranteed, even under demanding conditions. The steps are also available with a serrated surface to enhance slip resistance.

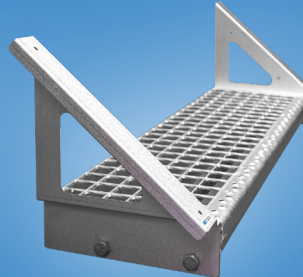

Flexi Construction Steps are easy to install and remove, allowing for repeated use across multiple construction projects.

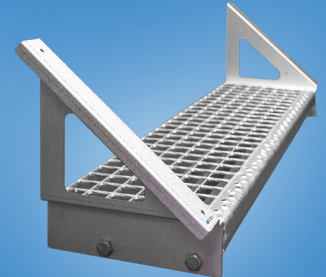

**600 x 240 mm**  
Item no.: BPT600240

**800 x 240 mm**  
Item no.: BPT800240

**900 x 240 mm**  
Item no.: BPT900240

**1000 x 240 mm**  
Item no.: BPT1000240
